LONECO

From recycled vinyl & wood powder, as well as our own devotion to Nature, comes Lonseal's latest effort to aid the environment – Loneco.

This remarkable resilient sheet vinyl product offers the earthy visual appeal of cork in elegant colorways – making it perfect for healthcare, school/child-care, restaurant, retail outlet, and office applications. Crafted from an average of over 50% recycled materials, Loneco emits ten times less VOC's and aldehydes than linoleum and half as much undesirable emissions as rubber flooring – outperforming other so-called eco-friendly floors, such as linoleum, in U.S. government tests for indoor air quality and manufacturing resource/fuel conservation while maintaining a lower lifecycle cost than other floors.

PRODUCT HIGHLIGHTS

- Composed of an average of 50% post-industrial recycled vinyl and wood powder to reduce its impact on the environment through the use of renewable materials and enhanced-sustainability production modes.
- GREENGUARD™ Certified. Emits 10 times less volatile organic compounds (VOC) and aldehydes than linoleum flooring – with superior Indoor Air Quality (IAQ) measurements versus linoleum according to U.S. Commerce Department tests.
- Has lower lifecycle costs, longer durability, and superior manufacturing resource/fuel conservation results than linoleum according to Commerce Department tests – making it “Greener” than natural alternatives such as linoleum.
- Emits 50% less VOC & aldehydes than rubber flooring.
- Thick clear wear-layer protects the materials and color against moisture, wear or fading – while its sheet production allows seam-welding, facilitating sterile-floor installations.
- Color range includes several enchanting, subtly speckled earth-tones as well as some inviting soothing hues.
