The Mat King Failsafe Domed Industrial Warning Mats

Technical Data Sheet

Page 1 of 4

Composition: Molded bright yellow rubber top with a non-electric noise producing mechanism inside each molded sound holes equipped rubber half domed unit with a plywood backer board under the entire assembly and metal mounting units to hold unit in place of installation.

Method of Use: Failsafe Domed Industrial Warning Mats are deployed so that anyone entering a danger zone will be immediately alerted to the situation by the bright safety yellow color of the mat itself, also by the very unusual feel one gets when one steps on the rubber truncated domes which are very distinctive compared to anything else one would have been walking on, and from the extremely high pitched and very annoying and attention grabbing sounds generated by the noise producing mechanisms in the unit.

Operating Requirements: Failsafe Domed Industrial Warning Mats are to be installed on a floor or walking surface in as large and as noticeable a configuration as possible in order to alert employees who have come into that area that they have reached an area where their proximity to a potentially lethal danger is now requiring their immediate attention and that reversing their steps and that leaving the area is what they absolutely must to do and they must do so immediately.

Common Applications: Failsafe Domed Industrial Warning Mats are most often used in manufacturing plants where certain situations exist that cannot be otherwise configured and that leave workers with no physical barrier that would otherwise protect them from advancing further into an area where certain dangers will be encountered by them and, therefore, before which an unmistakable, unavoidable and an immediate warning is absolutely needed to save them from injury or even death

Warnings: Domed Industrial Warning Mats are just that. They warn users that there is danger nearby. But, that is all they are and users must be sure to take all possible measures to protect their employees and themselves against potential injuries and even
